Place slate-effect porcelain stoneware represents the most advanced synthesis between technological know-how and natural emotion.
PLACE is the final goal on a path that abounds with dedication and technical skills. Searching the world for stones of resolute character and unique personality. Identifying the most stunning slabs and features, seizing their beauty, to return it in an even more authentic state of perfection with the utmost fidelity; recreate the multiple three-dimensional structures of the surface. Each Place slab encapsulates all the beauty and versatility of nature: a world of colors, reliefs, veining and details.

PLACE
COLORED-BODY PORCELAIN TILES - RECTIFIED

Color-coordinated porcelain stoneware tiles are produced minimizing the color difference between the glaze and the body. Nevertheless, the design is visible only on the surface.

STRAWBERRY

Caesar warrants that our products meet or exceed the requirements of ANSI, specification ANSI A137.1: 2012, as shown in our Tile Performance Data sheets.

In case of running pattern installation, Caesar recommends a maximum 33% offset.

Caesar reserves the right to modify the products illustrated in this catalogue for reasons of production or to improve quality. Samples are purely indicative. Packaging and weights are nominal. For actual size information please refer to page 31.

FINAL CLEANING AFTER INSTALLATION

A few hours after grouting, as soon as the grout starts to dry and becomes opaque, sweep the floor. Within 48 hours from grouting and before the grout hardens definitively, wet the floor with an acid and buffered solution. Dilution depends on the type of surface (smooth or textured).

Spread the solution containing acid especially made for stoneware using a mop or a rotary brush for large surfaces, and featuring suitable discs, and let the solution work for a few minutes. Rinse with warm water and clean cloths and repeat several times until all stains and residues have been eliminated. Make sure to change rinsing water several times. Complete tip-drying.

Prevent contact of the acid solution with other materials (metal, marble, etc.).

ATTENTION! Epoxy-based grout cannot be cleaned when it has completely hardened other than mechanically with the aid of a hand drill and a hard metal brush. For more information and recommendations, consult the grout manufacturer.

Care must be taken on inlayed, polished and anti-slip products; for the latter in particular, the use of a floor-washing machine combined with the action of an acid detergent helps reach the spaces between adjacent tiles and cleans them properly.

If such a cleaning procedure is not carried out, or if such cleaning is carried out too late, the grout residue creates an extremely absorbent filter, which holds dirt, making the surface difficult to clean in this case. Caesar Ceramics USA, Inc. will not be liable for any damage caused to the surface.

CLEANING AND CARE

If the cleaning rules after installation are followed, routine maintenance, i.e. everyday cleaning to remove dirt from traffic and general use of the tiled surface, is reasonably easy.

We would like to remind you that porcelain stoneware is a product with excellent technical features which allow for the highest grade of mechanical wear and resistance to acids (except for hydrofluoric acid and its derivatives) and alkalies, features which are added to a high aesthetic quality.

Porcelain stoneware has a low absorption level, another intrinsic characteristic of the product. As detailed in the technical sheets, absorption levels are very low in the production process CAESAR adopts, and all our products will achieve the best results for any kind of specific application.

Ordinary maintenance must be carried out using specialist detergents to remove stains but these detergents must not leave a wax, film or membrane residue.

Rinsing well with plenty of clean water is a fundamental part of the cleaning procedure, therefore we advise against the use of products which state that they “do not need rinsing”.

We would like to inform you that, the above mentioned standards do not cover rubber stainers (shoes, heels, mats, etc.), especially where these kinds of stains are frequent; therefore, Caesar Ceramics USA, Inc. will not be liable for any such damage to the surface of these products. All types of surface of the Caesar range can be washed with clean water or water and up to 50% of bleach or alcohol.

We recommend periodical cleaning with basic products or a micro-froaming basic product for porcelain stoneware, followed by thorough rinsing and drying.

HEAVY-DUTY CLEANING

Any stains or marks can be removed quite easily since porcelain stoneware has very low absorption properties and resists acids and bases. Depending on the type of stain, you can use:

- ACIDS for INORGANIC stains,
- BASES for ORGANIC stains.
- SOLVENTS for SYNTHETIC stains.

The use of common aggressive acids (such as muriatic acid for instance) must be avoided. These products remove residues of grout but also irreparably damage the grout within the joint. Also pay attention to all products containing HYDROFLUORIC ACID (HF) SINCE THEY IRREPARABLY DAMAGE ALL CERAMIC SURFACES.

WARNING

The above suggestions are a result of research, laboratory tests and several years’ experience. However, the cleaning features of the materials may vary significantly according to the different installation methods, conditions of use, types of surface and destination. As a general rule, the higher the anti-slip values of the tiles are, the greater the cleaning inconveniences may arise. The professional operator in charge of maintenance and cleaning shall always check the surface condition before proceeding with any cleaning and/or maintenance operation (we would suggest for the same tiles before installation). Caesar declines any liability with reference to cleaning and maintenance operations in case of heavy conditions of use (such as mechanical workshop or spaces presenting oily residues or high traffic) after installation, or if the tiles show signs of damage. We must be notified within 5 years from installation if such a cleaning procedure is not carried out, or if such cleaning is carried out too late, the grout residue creates an extremely absorbent filter, which holds dirt, making the surface difficult to clean in this case. Caesar Ceramics USA, Inc. will not be liable for any event, damage or defect due to wrong installation of the tiles, faulty cleaning and maintenance operations or inadequate choice of the type of material to be laid or of the adhesives used in a certain destination of use.
FROM OUR PLANT ....

The brand new production facilities in the USA are built in compliance with the most stringent standards in term of environmental protection, safety of workers and reduction of energy consumption.

TO YOUR PROJECT.

By choosing Caesar Ceramics USA, the end user will be sure to purchase durable, safe and green floor and wall tiles: being extremely durable, they do not call for any chemical treatment, varnish or special detergent. They do not release dust or other substances, even when subject to high pedestrian traffic.

SUSTAINABLE MIND

</table>

Average values refer to the last two years of production and related to the matte finish of the product.

* Values relate to the matte finish of the product and to tests carried out by certified external laboratories, whose results are available upon request.

* Due to the intrinsic nature of porcelain stoneware tiles, please note that the coefficient of friction may vary within the same production lot or from one production lot to the other. Caesar products can become slippery when wet. We recommend to always keep the surface dry.

Color reproductions may vary from actual products.

Caesar reserves the right to modify the products illustrated in this catalogue for reasons of production or to improve quality. Samples are purely indicative. Packaging and weights may vary for production reasons. Contact our sales department when ordering.
