FLOOR TILES
perfect floors for unique spaces
06 Introduction / introducción
08 Hexa Floor
20x23 cm
18 Trapezium Floor
10x23 cm
30 Chevron Floor
10x52 cm
42 Technical Features
we have designed three different models that can be combined with each other, which allow to create endless compositions, ensuring the exclusiveness of each space. Endless layout solutions “Create your own".

Hemos diseñado tres modelos diferentes combinables entre sí, los cuales permiten crear composiciones infinitas, asegurando la exclusividad de cada espacio. Infinitas combinaciones “Crea la tuya".

In order to guarantee the characteristics of the finish the product must be kept in its original packaging until the time of fixing. If the product is likely to be stored for a long period of time it should be suitably covered.

**Tile Fixing**

To ensure porcelain earthenware floor tiles adhere correctly to the surface, it is essential to use specific adhesive and grouting material. This must also be suitable for the environment they will have to withstand. Fitting with traditional mortars does not ensure good adhesion.

All types of joints must be planned and carried out correctly: structural, perimeter, expansion and installation joints. Fitting tiles without joints is not advisable from any technical point of view as this may lead to various problems. We recommend a minimum installation joint of 2 mm (0.5/64 in).

**Maintenance and Cleaning**

Once the materials have been fitted, it is advisable to remove any remaining adhesive and grouting material by using a commercial descaling product designed especially for ceramic floor tiles, diluted with water. The descaling product must not remain in contact with the surface to be cleaned for more than 5 minutes. To check that the chosen cleaning product will not damage the paving, we recommend previously testing an area that is hidden or not easily seen, or testing a tile that has not been fitted.

As a general guideline, powder detergents should not be used, not wire wool or abrasive materials. Generally a sponge will be sufficient with warm water and liquid neutral soap. Then rinse with plenty of clean water.

**FLOOR TILES, RECOMMENDATIONS / Recomendaciones**

**Warehousing**

In order to guarantee the characteristics of the finish the product must be kept in its original packaging until the time of fixing. If the product is likely to be stored for a long period of time it should be suitably covered.

**Tile Fixing**

To ensure porcelain earthenware floor tiles adhere correctly to the surface, it is essential to use specific adhesive and grouting material. This must also be suitable for the environment they will have to withstand. Fitting with traditional mortars does not ensure good adhesion.

All types of joints must be planned and carried out correctly: structural, perimeter, expansion and installation joints. Fitting tiles without joints is not advisable from any technical point of view as this may lead to various problems. We recommend a minimum installation joint of 2 mm (0.5/64 in).

**Maintenance and Cleaning**

Once the materials have been fitted, it is advisable to remove any remaining adhesive and grouting material by using a commercial descaling product designed especially for ceramic floor tiles, diluted with water. The descaling product must not remain in contact with the surface to be cleaned for more than 5 minutes. As a general guideline, powder detergents should not be used, not wire wool or abrasive materials. Generally a sponge will be sufficient with warm water and liquid neutral soap. Then rinse with plenty of clean water.

**Almacenamiento**

Para garantizar las características de su acabado, el producto debe mantenerse en su embalaje original hasta el momento de la colocación. Si el producto va a permanecer almacenado durante un largo periodo es conveniente hacerlo bajo cubierta.

**Colocación**

Para garantizar una buena adhesión al soporte es necesaria la utilización de materiales de agare y de rejuntado para baldosas de gres porcelánico y adecuados al ambiente al que vayan a estar sometidos. La colocación con morteros tradicionales no garantiza una buena adhesión.

Deberán planificarse y ejecutarse correctamente todo tipo de juntas: estructurales, periféricas, de dilatación y de colocación. La colocación sin juntas es desaconsejable desde cualquier punto de vista técnico, pudiendo ser el origen de diversas patologías. Se recomienda una junta de colocación de 2 mm.

**Mantenimiento y Limpieza**

Finalizada la puesta en obra se recomienda eliminar los restos de materiales de agarre y de rejuntado con un desincrustante comercial diseñado especialmente para baldosas cerámicas, rebajado con agua, permaneciendo en contacto con la superficie a limpiar no más de 5 minutos. Para verificar que el limpiador escogido no dañará al pavimento se requiere hacer una prueba previa en una zona oculta o poco visible o en una baldosa sin instalar.

Como norma general no deben utilizarse detergentes en polvo ni estropajos metálicos o abrasivos. Generalmente será suficiente con una esponja, agua tibia y un jabón líquido neutro. Posteriormente aclarar con abundante agua limpia.
