The Company

For over two decades, Stonepeak has been a trailblazer in the porcelain industry, embodying innovation, sustainability, and unwavering excellence. Our journey began nestled in the hills of Tennessee’s Smoky Mountains, where we made it our goal to produce the highest quality, most eco-friendly product on the market.

At Stonepeak, we thrive on pushing boundaries, introducing groundbreaking technology and advancements that elevate our products beyond the ordinary. From cutting-edge designs to sustainable manufacturing practices, innovation is woven into our corporate DNA.

As stewards of the environment, we take immense pride in our commitment to sustainability. Our meticulously crafted high-quality porcelain surfaces aren’t merely beautiful; they are also environmentally responsible. We believe in leaving a positive legacy on the planet for generations to come.

While our roots remain firmly planted in Crossville, TN, our influence extends far beyond. Stonepeak serves clients across the nation, gracing homes, commercial spaces and architectural marvels with our exceptional products.

Not long ago, we envisioned a company that would seamlessly unite the finest products with a genuine focus on people. Today, that vision is our reality—a refreshing transformation in the ceramics industry where our commitment to you remains unwavering.

Sustainability

As the U.S. operation of the renowned Iris Ceramica Group, Stonepeak is deeply rooted in a legacy of sustainability. Our journey begins with the visionary founder, Romano Minozzi, who coined the term “Economy = Ecology” in the 1960s. This powerful concept encapsulates his vision of an economy that serves both humanity and the environment we inhabit.

Inheriting this profound philosophy, Stonepeak has always had sustainability woven into its DNA. Our commitment extends beyond mere words; it is reflected in every aspect of our business.

Stonepeak continuously works to create a higher environmental standard, striving to lower its carbon footprint and provide customers with the most ecofriendly porcelain product on the market.

To reduce energy, water, and waste, Stonepeak introduced an innovative formula that utilizes mostly raw materials found in the U.S., with a vast majority being sourced within 250 miles from our manufacturing plant in Crossville, TN. This produces a greener generation of products that is American made.

Our state-of-the-art manufacturing facility also operates with sustainability at its core. Key practices include a nearly closed-loop process, where raw materials and water waste are efficiently recycled back into production. Additionally, our facilities exceed legal requirements, incorporating antipollution devices such as smoke and sand depurators, water purifiers, and reutilization of heat from kilns and production losses. The plant also utilizes eco-conscious packaging and has received accolades from rigorous certifications such as DECLARE, ISO 9001, LEED, EPD, GREEN GOLD, and GREEN SQUARED.

At StonePeak, our commitment to the environment resonates through every solution we create. We firmly believe that sustainable practices not only benefit our planet but also enrich the lives of those who choose our products.

The collection

Inspired by the noble heritage of English stone, the Victorian Stone collection seamlessly blends aesthetic exploration with cutting-edge technology, resulting in enhanced qualities with a distinctive contemporary touch. Crafted with meticulous artistry, these porcelain solutions evoke the grandeur of historic estates, the elegance of Victorian architecture, and the timeless charm of English countryside manors.

The natural beauty of Victorian Stone is transformed into a modern design application, making it ideal for a wide variety of spaces.

This versatility is further enriched by five organic colors – Baycliff Black, Forest Green, Limestone Beige, Moon Cream, and Silver Grey – and five meticulously crafted finishes – Natural, Natural Plus, Structured, Flamed, and Antislip for exterior applications – each tailored to suit a variety of settings.

The result is a design that exudes both timeless elegance and modern appeal, embodying a perfect fusion of style, functionality, and comprehensive design.

Finishes

Natural

The Natural finish is distinguished by a matte and non-reflective appearance that evokes the visual qualities of the materials that inspire the product. This sense of authenticity is enhanced by a soft and pleasant texture to the touch, which also contributes to its particular ease of cleaning. Thanks to these characteristics, it can be used in a wide variety of indoor spaces, from traditional settings to contemporary ones.

Natural Plus

The Natural Plus finish enhances the qualities of the Natural finish, offering a realistic appearance and a soft touch, with an R10 slip resistance rating. For this reason, it is ideal for interior design projects in spaces where higher slip resistance is required, such as bathrooms and other areas exposed to water and humidity.

Flamed

The Flamed finish replicates the characteristics of ancient bush-hammering techniques, resulting in a delicately textured surface that is soft to the touch. It adds character and harmony to installation projects in both indoor and outdoor spaces.

Structured

The Structured finish replicates the characteristics of an ancient stone processing technique that imparts a refined sense of longitudinal directionality to the material. The result is an artisanal-inspired interpretation that enhances spaces by combining naturalness and dynamism.

Finishes

Antislip

The Antislip finish features a more structured texture, increasing friction and making it particularly resistant to slipping. Thanks to these qualities, it is ideal for outdoor applications, humid environments, and commercial or public spaces that require the highest safety standards.
